### **I. Entry of Amendments**

Applicants respectfully request these amendments be entered despite the finality of the rejection because they place the claims in condition for allowance.

### **II. Interview Summary**

Applicant thanks the Examiner for the courtesy extended during the Examiner Interview which took place with Applicant's representative on October 20, 2010. During the Interview, the above amendments were discussed. No agreement as to the allowability of the claims was reached.

### **III. Claim Rejections Under 35 U.S.C. § 103(a)**

#### **A. Claims 9-11, 61, 72, 46, 62, 63, 67, 73, and 76**

On page 3 of the Office Action, Claims 9-11, 61, 72, 46, 62, 63, 67, 73, and 76 are rejected under 35 U.S.C. §103(a) as being unpatentable over U.S. Patent No. 6,421,527 to DeMartin (hereinafter "DeMartin") in view of U.S. Patent No. 6,067,289 to Mueller (hereinafter

“Mueller”). Independent Claims 9, 61, and 72 have been amended rendering this rejection moot. Applicant respectfully submits that DeMartin in view of Mueller fails to disclose, teach, or suggest at least one element of amendment Claims 9, 61, and 72.

Independent Claims 9, 61, and 72 have been amended to include features that were previously presented in Claims 62, 71, and 73 (now canceled). In addition, Claims 9, 61, and 72 have been amended to include features of now canceled Claim 6. On page 19 of the Office Action, the Examiner notes that Claim 6 “would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.” Amended independent Claim 9 recites in part:

locating error check bits associated with a first transport channel of the plurality of transport channels, wherein the plurality of transport channels comprise a set of class A bits associated with the first transport channel and a set of class B bits associated with a second transport channel, wherein at least a portion of the class A bits comprises a set of cyclic redundancy check bits associated with a cyclic redundancy check, and wherein the generic TRAU frame includes, in sequence, the set of class A bits, including the set of cyclic redundancy check bits, and the set of class B bits;

error checking the first transport channel based on the located error check bits;

Independent Claims 61 and 72, although of different scope, contain similar elements. Applicant submits that Claim 9 includes features similar to those of Claim 6 and any intervening claims, and is thus allowable over cited art as acknowledged by the Examiner. Accordingly, Applicant respectfully requests withdrawal of the rejection of Claims 9-11, 61, 72, 46, 62, 63, 67, 73, and 76.

**B. Claims 1-4, 7-8, 38, 42, 47, 49-54, 57, 59-60, 68, 70-71, and 77**

2002/0003783 to Niemela (hereinafter “Niemela”) in view of Mueller. Independent Claims 1, 47, 68, and 77 have been amended rendering this rejection moot. Applicant asserts that DeMartin in view of Niemela and Mueller fail to teach, suggest, or disclose at least one element of amended Claims 1, 47, 68, and 77.

Independent Claims 1, 47, 68, and 77 have been amended to include features that were previously presented in Claims 2, 6, 52, and 71(now canceled). On page 19 of the Office Action, the Examiner notes that Claim 6 “would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.”

Amended independent Claim 1 recites in part:

determining if error checking is required for one or more of the at least two transport channels, wherein the at least two transport channels comprise a set of class A bits associated with a first transport channel and a set of class B bits associated with a second transport channel;

computing error check bits for each transport channel that requires error checking, wherein at least a portion of the class A bits comprises a set of error check bits associated with a cyclic redundancy check;

determining a priority for each set of bits associated with each transport channel via the TRAU;

inserting into a generic TRAU frame, via the TRAU, each set of bits according to the determined priority of each set of bits, wherein the generic TRAU frame is adaptable for use with different codecs; and

inserting into the generic TRAU frame the computed error check bits associated with each transport channel that requires error checking, wherein the generic TRAU frame includes, in sequence, the set of class A bits, including the set of error check bits associated with the cyclic redundancy check, and the set of class B bits.

(Emphasis added).

Independent Claims 47, 68, and 77, although of different scope, contain similar elements. Applicant submits that Claim 1 has incorporated the features of previously presented Claim 6 and any intervening claims, and is thus allowable over cited art as acknowledged by the Examiner.
